

VERY IMPORTANT NOTE

This Revotec Cooling Kit has been engineered to provide perfect cooling for your Series 2A/3. However it is essential the other components of the cooling system are operating correctly.

The following must be checked:

1. The Radiator has a normal life expectancy of approx 8-9 Years after this time It should be thoroughly assessed and any signs of deterioration such as furring up internally or out of shape it is recommended it is replaced.
2. The Radiator fins Must be clear of all debris such as mud and leaves.
3. The system Must be filled with Correct Coolant.
4. The Water Pump and thermostat must be operating correctly.

Disconnect the battery terminal.

1. Drain the water system, remove the top hose and the front grill.

2. With reference to Fig.1 position the radiator brackets on the front side of the radiator and loosely secure the brackets in place using the original radiator mounting bolts.

3. Insert the plastic fan mounting feet to the cooling fan (Fig.2)

4. Loosely assemble the fan onto the 2 brackets fan in order as shown (Fig.3)

5. Carefully tighten the entire assembly making sure that the fan sits flat and without any strain.

6. Follow Electronic Fan Controller instructions for information on connection and set-up.

7. Replenish the water system and check for leaks.
